

About

CURTI born in Imola in 1955, as manufacturer of spare parts for textile and agricultural machinery, with about ten employees; today is based in Castel Bolognese and made up of 5 business units with over 600 employees in the group, divided into 10 companies in Italy and around the world.

CURTI is a leader in the supply of aeronautical systems and services, thanks to a recognized reliability, made of very high quality levels. The important collaborations with companies operating in the Naval and Defense sectors have led the way of technological development in terms of manufacturing methods of complex parts, still today the basis of the working method in CURTI.

The great ability to optimize processes, combined with some skills for very specific processes, with the related non-destructive tests, have allowed us to move from a traditional third party account to co-engineering activities, where CURTI participates and proactively supports the design of machines and complex systems for all its customers, using advanced design software such as CREA, CATIA, PRO-E, and others.

To date, CURTI's production plants extend over an area of 60,000 square meters, of which about 30,000 are covered.
