

About

Founded in 2008 and headquartered in Mirandola (MO), EGICON is an Italian engineering company specialized in the design, development, and production of advanced electronic systems and smart automation solutions. With a team of over 100 professionals—39 of whom are engaged in R&D—EGICON operates internationally and supports high-tech industries with tailored, high-performance technologies. The company is structured into two strategic business units: Electronics and Process Solutions. Thanks to strong in-house capabilities in engineering, validation, and production, EGICON ensures innovation, reliability, and precision across the entire product lifecycle. Two operational facilities in Mirandola (4,500 sqm total) are dedicated to R&D and automated production, respectively.
