

About

Founded in 2020 in Modena, Italy, NOVAC develops lightweight, flexible supercapacitors that integrate seamlessly into structural components, optimizing space and weight in automotive, aerospace, and marine applications. By combining innovation with a strong focus on performance and sustainability, NOVAC enhances energy efficiency, extends device lifespan, and improves safety across mobility and industrial sectors.

EMPLOYEES

Products & Services

- Custom manufacturing of supercapacitors tailored to specific applications
- Sizing and optimization of energy storage systems for maximum efficiency
- Energy storage system testing to validate performance and reliability
- Advanced simulations for system integration and performance prediction
- Development of cell chemistries to enhance energy density and durability
- Complete engineering and custom module design for energy storage integration
- Custom electronics development for module management and performance monitoring

Main Markets

- Europe
- North America
